Introduction

- Families struggle to find reliable caretakers.
- Manual processes lead to errors and miscommunication.
- SmartCare provides a unified digital platform for care management.

Problem Statement

- Families struggle to find reliable caretakers
- No centralized system for Admin, HR Manager, Clients, and Caretakers
- Scheduling, complaints, and feedback are inefficient.
- Manual work causes mistakes and delays
- No single platform to manage everything

Our Solution

- Web-based caretaker management system.
- Centralized portal for clients, caretakers, HR Manager, and admins.
- Reliable and user-friendly system.

Project Goal

- Enhance quality and reliability of caretaker services.
- Enable transparent communication and role-based access.
- Reduce manual workload and improve operational efficiency.

Objectives

- Centralized Management of caretaker services
- Automated Booking & Payment process
- Efficient Task Tracking & leave management
- Role-Based Dashboards for admin, HR Manager, caretakers, and clients
- Service History & Feedback
- Complaint registration & resolution system
- Location & budget-wise caretaker filtering

Project Scope

IN- SCOPE

- Web-based caretaker management system
- User roles: Admin, HR, Caretaker, Client
- Caretaker scheduling and assignment
- Leave request and approval system
- Client feedback and complaint handling
- User login and role-based dashboards
- Reports and service history tracking

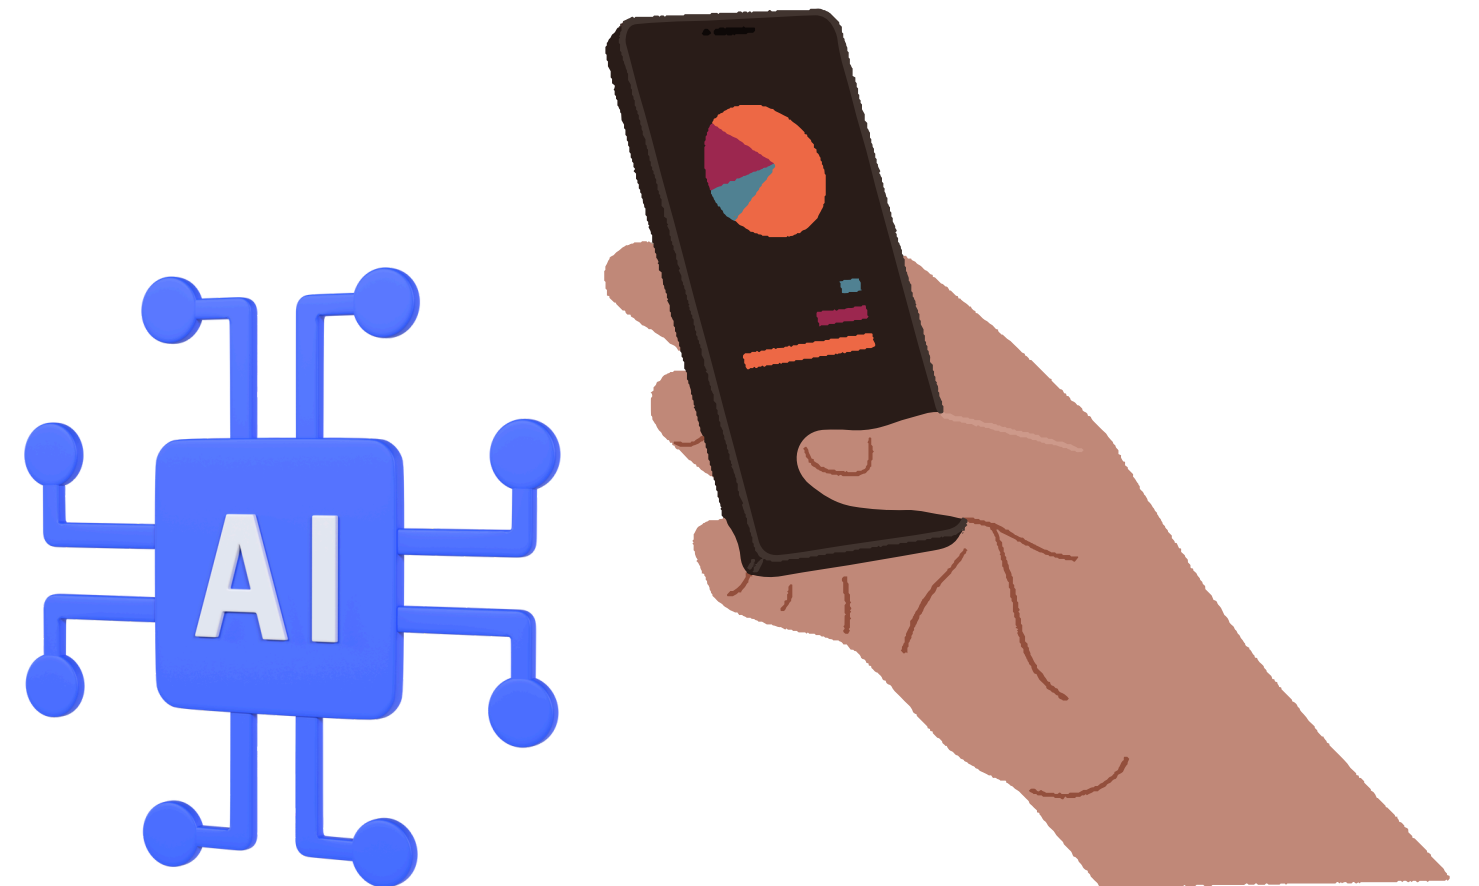

Project Scope

OUT- SCOPE

- Mobile application version
- Biometric attendance for caretakers
- Voice or video calling features
- Multilingual support
- AI-based scheduling or chatbots

SOCIAL FEASIBILITY

- The system was designed with input from a real caretaker company.
- It is easy to use for caretakers, clients, and admins.
- It supports elder care, babysitting, and maid services.
- Clients can register complaints for better service handling.
- Role-based access builds trust between users.
- Even non-tech users can operate the system easily.

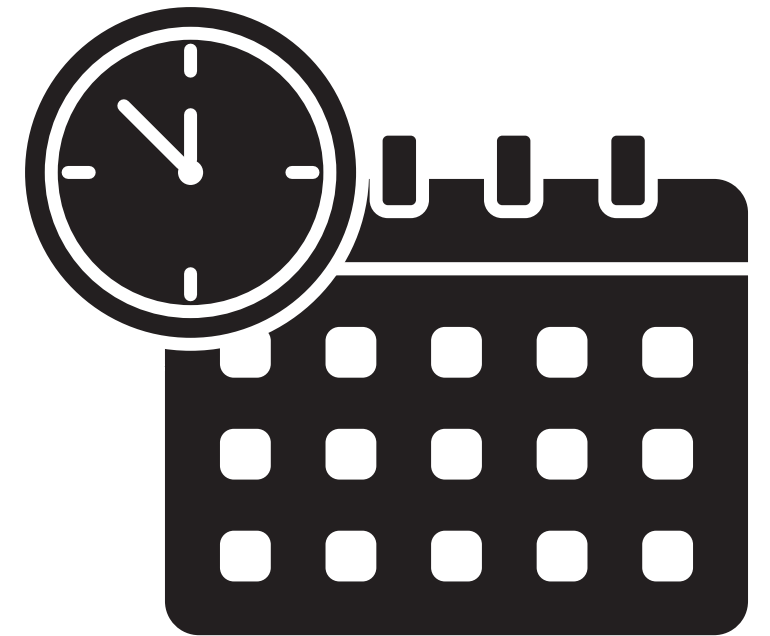

SCHEDULE FEASIBILITY

Man-Hour Calculation

- Estimated working time per member per week = 10 hours
- Estimated duration = 40 weeks
- Total hours per member = $10 \text{ hours} \times 40 \text{ weeks} = 400 \text{ hours}$
- Team size = 4 members
- Estimated total man-hours for the project = $400 \text{ hours} \times 4 \text{ members} = 1600 \text{ hours}$

Maid**

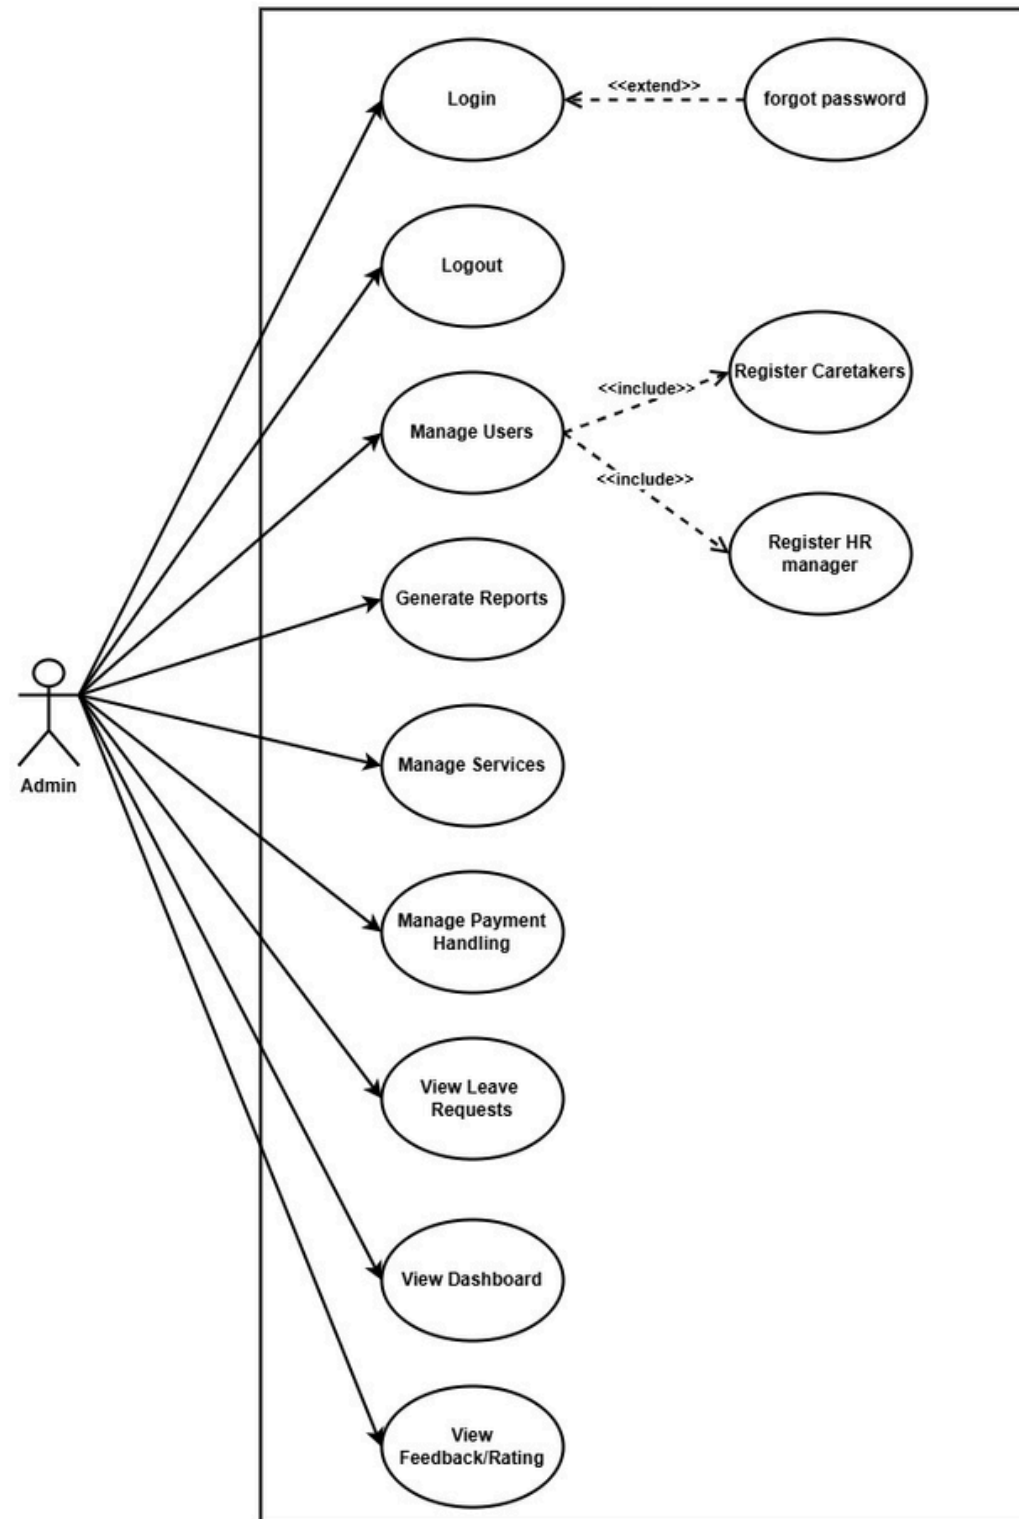

Client

Functional Requirements

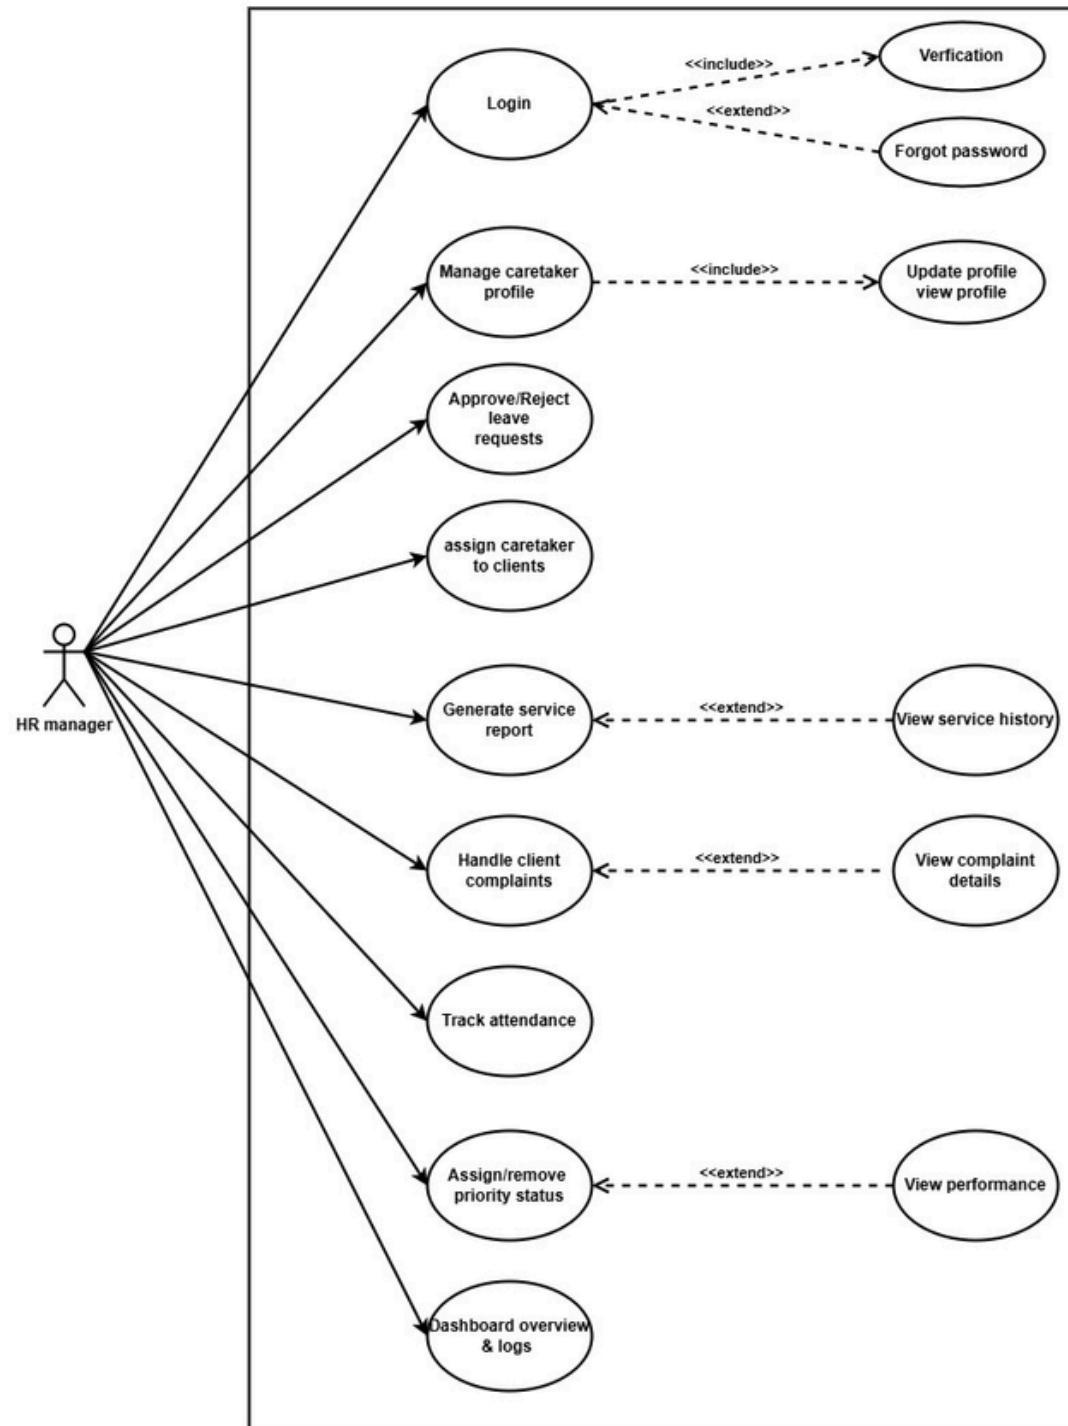

Admin (Caretaker Company)

- Login
- View dashboard (clients, caretakers, bookings, usage)
- Manage users (HR Manager, caretakers, clients)
- View all users with filters by role or service type
- Manage client feedback
- View/export reports (usage, payments, performance)
- View caretakers leave records
- Monitor full history logs and user activity
- Send system-wide announcements/notifications
- View payment reports and financial summaries

HR Manager

- Login
- Manage caretaker work schedules
- Approve/decline caretaker leave requests
- Assign caretakers to client services
- Track caretaker attendance & availability
- View caretaker performance (client feedback)
- View caretaker service history
- Generate reports on caretaker activities & services
- Assign/remove high-priority status to caretaker
- Add/update caretaker working locations
- Approve/reject client service requests
- Handle complaints related to caretakers or services

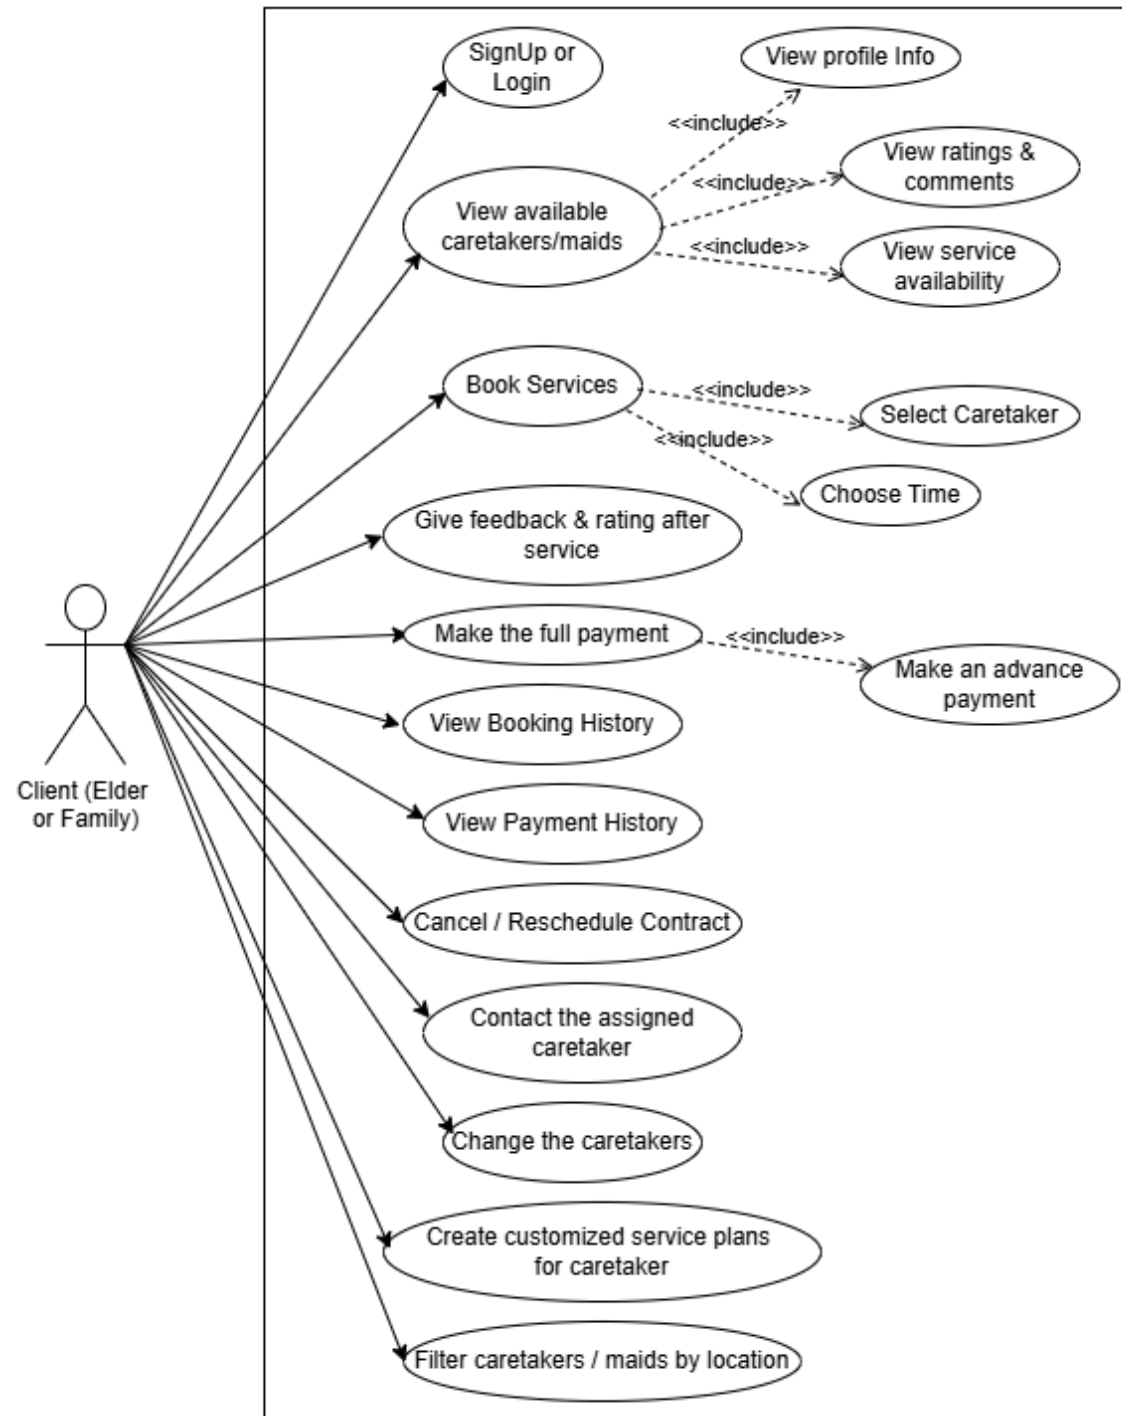

Caretaker or Maid

- Sign Up & Login
- View/update personal profile details
- View assigned client list & work schedule
- Apply for leave with reason & dates
- View leave request status & history
- View client feedback & ratings
- Access service history
- Mark attendance (check-in/out)
- View personal priority status/badge
- Receive priority /special bookings
- Get notifications (requests, updates)
- Accept/reject assigned service requests
- Report issues or complaints

Client (Elder/Family)

- Sign Up & Login
- View available caretakers (profile, ratings, availability)
- Book services (select caretaker, date & time)
- Make advance payment at booking
- Pay remaining balance after service
- Give feedback & ratings
- Complaining about caretakers
- View booking & service history
- View payment history
- Cancel or reschedule contract
- Contact assigned caretaker
- Change assigned caretaker if not satisfied
- Create customized service plans for caretakers
- Filter caretakers by location

Quality Attributes

Security

- Role-based access control
- Secure login with encrypted passwords
- Prevents unauthorized data access

Reliability

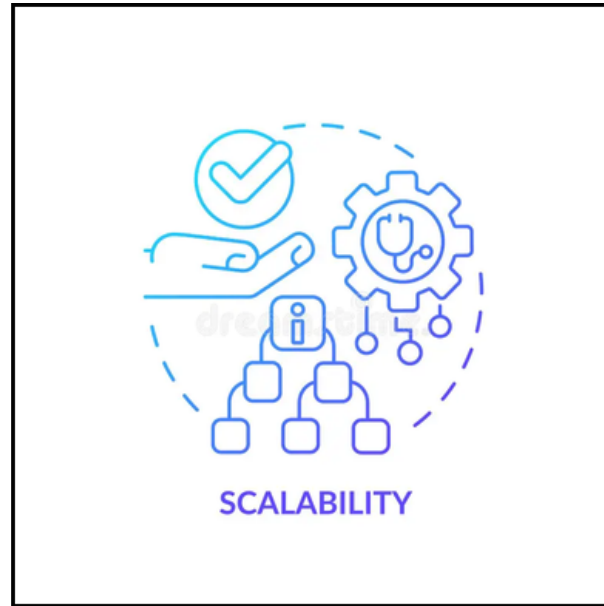

- Continuous service availability
- Graceful failure handling
- No data loss

Performance

- Pages load within 2-3 seconds
- Fast search & report generation
- Handles simultaneous users without lag

Scalability

- Supports more users
- Allows adding new service types
- Expand modules as needed

Maintainability

- Easy to fix, update
- Good developer documentation
- Uses Git for version control

Usability

- Simple, intuitive UI
- Accessible for non-technical clients
- Responsive on desktop, tablet, mobile
