

PAYMENT FLOW (SMART CARE)

1) Client booking flow

1. **Client selects available caregiver**
 2. Client fills booking form and submits
 3. System saves into **bookings**
 - status = Pending
 4. HR/Manager dashboard shows this request
-

2) HR decision flow

A) If HR rejects

1. HR clicks Reject
2. System updates booking:
 - status = Rejected
3. Client sees “Rejected” + reason (optional)

B) If HR accepts

1. HR clicks Accept/Approve
2. System updates booking:
 - status = AwaitingPayment
 - approved_at, approved_by
3. System creates the **initial invoice** based on basis:

Hourly

- Initial invoice = **full amount**
- Due date = (today + 1 day) or (today + 2 days)

Monthly

- Initial invoice = **1 month advance**
- Due date = (today + 1 day / 2 days)
- Set:
 - advance_months = 1

Yearly

- Initial invoice = **3 months advance**
- Due date = (today + 1 day / 2 days)
- Set:
 - advance_months = 3

4. Client gets notification: **“Approved. Pay advance to activate service.”**
-

3) Client payment flow (activation)

If client pays initial invoice on time

1. Payment saved in payments
2. Invoice becomes Paid
3. Booking becomes:
 - status = Active
 - activated_at = NOW()
4. System sets plan values:

Hourly

- Booking is active only for that booked period
- No future invoices needed

Monthly

- next_payment_due = activated_at + 1 month
- (advance is considered used for the first month)

Yearly

- $\text{advance_credit} = 3 * \text{monthly_fee}$
 - $\text{next_payment_due} = \text{activated_at} + 1 \text{ month}$
 - Each month you still “expect” payment, but you can cover missing payments using `advance_credit`
-

4) Monthly billing cycle (recurring)

A daily scheduled job (cron) runs once per day.

Step 1 — Generate invoice

For each booking with `status=Active` and `basis IN (monthly, yearly)`:

- If $\text{today} == \text{next_payment_due}$:
 - create invoice for **monthly fee**
 - set invoice `due_date` = today + X days
 - notify client: “Your monthly payment is due.”

Step 2 — Send reminders

For each invoice Unpaid:

- Remind at:
 - 3 days before due
 - 1 day before due
 - on due date
 - after overdue (optional)

Step 3 — Handle overdue payments

If $\text{today} > \text{invoice.due_date}$ and invoice still Unpaid:

Hourly

- Cancel booking immediately:
 - `status = Cancelled`

- reason: “Non-payment”

Monthly

- Cancel booking immediately (or after grace days):
 - status = Cancelled
 - reason: “Monthly payment overdue”

Yearly (advance deduction logic)

- If `advance_credit >= monthly_fee`:
 - deduct `monthly_fee` from `advance_credit`
 - mark invoice as `CoveredByAdvance`
 - booking can continue (optional set booking status=`PastDue`)
 - notify: “Payment missed. Deducted from advance. Remaining advance covers N months.”
- Else (`advance_credit < monthly_fee`):
 - cancel booking automatically:
 - status = Cancelled
 - reason: “Advance exhausted & payment not received”

5) Yearly special behavior (your exact rule)

Client pays monthly normally.

If they don't pay, they can continue for up to **3 months**, because the system deducts from the **3-month advance**.

- Month 1 missed → advance covers it → remaining 2 months
- Month 2 missed → advance covers it → remaining 1 month
- Month 3 missed → advance covers it → remaining 0 months
- Month 4 missed (or still unpaid) → **auto cancel**

6) What client sees on dashboard (important)

For each booking:

- Status: Pending / AwaitingPayment / Active / PastDue / Cancelled
- Next payment due date
- Outstanding invoice amount
- For yearly:
 - “Advance remaining: 2 months” (calculated)
